*Election/Restrictions*

Restriction is required under 35 U.S.C. 121

- I. Claims 1-21 are drawn to an electronic learning aid for teaching arithmetic skills having a scoring system and or question probability selector, classified in (434/188,322).
- II. Claims 22-23 are drawn to a user interface that limits a question response time based on expected response character input length, classified in (715/700).
- III. Claim 24 is drawn to a user interface that ceases accepting input upon entry of an incorrect alphanumeric character, classified in (715/700).

The inventions are distinct from each other because Inventions I-III are prima facie independent and distinct inventions due to their recitations of distinct and specific structures. Invention I is directed to an electronic learning aid for teaching arithmetic skills having a scoring system and or question probability selector. Invention II is directed to a user interface that limits a question response time based on expected response character input length. Invention III is directed to a user interface that ceases accepting input upon entry of an incorrect alphanumeric character. Because these inventions are distinct for the reasons given above, and has acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
